Hold Stamp 4 VISA (Permanent Resident in Ireland) | Technical & Application Support Manager | Agentic AI Engineer | Software Architect
Dundalk, County Louth, Ireland

Summary

In the AI Engineer Agentic Track, I gained practical knowledge and skills in developing AI agents through a six-week curriculum. The course emphasized hands-on coding and real-world applications, focusing on the theory of AI agents, design patterns, and architectures. Key topics included:AI Agent Frameworks: Explored various frameworks, particularly the OpenAI Agents SDK, to create intelligent agents capable of interacting with complex datasets and APIs.Real-World Applications: Applied learned theories to commercial projects, demonstrating the business impact of agentic AI.Advanced Techniques: Learned to utilize Large Language Models (LLMs) for orchestrating agent actions and implementing Retrieval-Augmented Generation (RAG) techniques to enhance data comprehension and usability.Agent SDK Development: Engaged with cutting-edge tools for building and customizing agents, including Crew AI, enabling innovative solutions in automated research and data analysis.This course significantly improved my understanding of AI technologies and their application in various industries, aligning my skills with emerging job needs in AI, agentic AI, LLMs, and related fields. I am now well-equipped to contribute to projects that leverage these advanced technologies for solving complex challenges in the AI landscape.

Experience

Kaseya

4 years 1 month

Senior Technical Support Engineer - Tier 1
September 2026 - Present (3 months)
Dundalk, County Louth, Ireland

Technical Support Expert Level - 1
